CONTINUING EDUCATION PRESENTATION

Ron Auflick

Retired-Wold Energy Partners

Friday, November 12, 2021

True River Cross Commons

Breakfast: 7:15 am

Presentation: 8:00 to 11:30 am

Cost: \$60/person (cash/check)

RSVP by Nov 4 to dchase@blm.gov

Imagine a calm hot day in California or a cold day in Texas, what do they have in common? With the impending energy shortage (natural gas and oil) and the inability of green energy to step up, can today's energy professionals use their historically proven talents to innovate and deliver? On November 12th Ron Auflick will look at the oil industry using his 40+ year perspective and share ideas on where the energy industry has to go. Innovations advancing the shale revolution into territories where stimulation is banned will be one of the key takeaways from his offerings. Additionally, the emerging love of geothermal will be dissected. Can existing oil and gas wells be converted to geothermal? See how focusing the talents of today's oil professionals may be the key to growth in geothermal.

Ron Auflick is a Casper-based engineer that has over 41 years of diverse domestic and international experience. Some of you may have attended previous SPE short courses he taught (2010 and 2015). Focusing on directional, horizontal and extended reach drilling, Ron has been directly involved in hundreds of unconventional wells in 10 states and some 31 countries including the current world record ERD wells. Departing from Oil & Gas, in 2021 he partnered with three other oil professionals and now is focused on geothermal. Ron has authored papers or given presentations for PAW, WGA, SPE, AADE, Wyoming Oil & Gas Fair, American Oil & Gas Reporter, Oilfield Review, and for American Society of Mechanical Engineers.
